

HASIRU KAVISHAN

Tel: +94712893518 | Email: bgh.kavishan@gmail.com | Middeniya, Sri Lanka

Full-Stack Software Engineer | LinkedIn: [linkedin.com/in/hasiru-kavishan-2715a7a2/](https://www.linkedin.com/in/hasiru-kavishan-2715a7a2/)

Portfolio: <https://hasiru-dev.web.app/>

PROFESSIONAL SUMMARY

Enthusiastic and self-motivated Full-Stack Software Engineer with over 5+ years of experience developing robust backend architectures and responsive user interfaces. Proven expertise in building cloud-based digital products, IoT systems, and complex supply chain automation tools. Highly skilled in Node.js, NestJS, ExpressJS, Java, Spring Boot, ReactJS, NextJS and AngularJS, with a strong background in docker and agile methodologies.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Colomba-Link (Switzerland)

Nov 2022 – Present

Project: Coconnect (HR Platform)

- **Frontend Engineering:** Architected and developed responsive B2B, B2C, and Admin user interfaces using **ReactJS**, **Redux**, and **MaterialUI**, ensuring high cross-device consistency and intuitive workflows
- **Backend Development:** Built and maintained robust, scalable backend microservices utilizing **Java Spring Boot** to handle complex workforce management features and enterprise business logic.
- **Database Management:** Designed and optimized relational database structures using **PostgreSQL** coupled with **Hibernate / Spring Data JPA** for efficient data access, security, and schema mapping.
- **API Architecture & Documentation:** Designed and integrated enterprise-grade **REST APIs** to support multi-role authentication workflows, while authoring and maintaining precise API technical documentation with **Swagger / OpenAPI**.

Project: Monidas

- **Event-Driven Microservices:** Built and maintained scalable **NestJS** microservices utilizing **Kafka** event streams to handle high-throughput, real-time IoT device communications and asynchronous data processing with **MongoDB**.
- **Full-Stack Dashboards:** Developed data-rich web interfaces using **React JS**, **JavaScript**, **Redux**, and **Tailwind CSS** to provide real-time visibility into active IoT devices.
- **Testing & Quality Assurance:** Practiced **Test-Driven Development (TDD)** and authored comprehensive unit tests using **Jest** to ensure structural reliability across distributed services.
- **Agile Leadership & Collaboration:** Led technical solution mapping by translating complex business requirements into technical specs while actively driving **Agile/Scrum** sprint planning, daily standups, and task estimations.
- **Documentation & Mentorship:** Authored and maintained detailed **REST API** contracts via **Swagger/OpenAPI** and hosted knowledge-sharing sessions to support, unblock, and onboard team members.

Software Engineer | Haulmatic Technologies

Dec 2019 – Oct 2022

- **State-Driven Frontend:** Built complex web frontends for a global supply chain automation platform using **AngularJS / Angular 9** and **NgXs** state management, maintaining code reliability through **Jasmine** unit test frameworks.
- **Microservices Development:** Developed high-throughput backend services utilizing a microservices architecture driven by **Spring Boot**, **Node.js**, **NestJS**, and **MongoDB**.
- **Cross-Platform Mobile:** Contributed to mobile application features using **Flutter** and **GraphQL** to improve real-time transport and fleet tracking capabilities.
- **CI/CD Automation:** Accelerated development cycles by configuring and managing automated **CI/CD** pipelines for **Docker** containerized environments.
- **Production & L3 Support:** Handled critical, high-priority live production bugs under a rotational roster, diagnosing issues and delivering fast-track hotfixes individually and as a team.
- **Agile Ownership & Mentorship:** Managed end-to-end sprint workflows via **Jira**, from requirements mapping and backend architecture design to leading Knowledge Transfer (KT) sessions for onboarding junior engineers.

Associate Software Engineer | Araaya Business Solution

Dec 2017 – Dec 2019

- **Full-Stack Government Systems:** Developed core modules of a land registry application system for the Ministry of Land Development using **Spring Boot, Angular, and MySQL**.
- **Product Engineering:** Designed and implemented critical application logic for a scalable product centered around EV Fast Charging station networks.

TECHNICAL SKILLS

- **Backend:** Node.js, NestJS, Kafka, ExpressJS, Java Spring Boot
- **Frontend:** ReactJS, NextJS, AngularJS, Redux, NgXs, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Material CSS
- **Databases:** MongoDB, PostgreSQL, MySQL, NoSQL, Prisma ORM
- **Testing & Methodologies:** Test-Driven Development (TDD), Jest, Jasmine, JUnit, Agile/Scrum, Design Patterns
- **Tools & IDEs:** Git, Bitbucket, Jira, Swagger/OpenAPI, Postman, Robo3T, Figma, JetBrains, VS Code, Bash Scripting, Vim

EDUCATION

BSc. in Computer Science

University of Colombo School of Computing | **2015 – 2018**
