PROFESSIONAL INTENDS

I am a person who has a great interest in new technologies and the IT industry beyond the world. Software Engineer | Web Developer | Programmer, I am an enthusiastic and self-motivated person who is seeking new knowledge and opportunities to obtain experience every day.

I'm a Software developer with 5+ Years of experience.excellent knowledge and experience in developing back-end applications with Java ,Spring MVC, Spring Boot, NestJs, NodeJs, Apollo GraphQL, BasedIO and developing front-end applications with Angular, NextJS, ReatcJs, JavaScript, HTML, Tailwind CSS, CSS, SCSS, JQuery, MongoDB, PSql, MySql and doing deployments and product maintenance using OVH Cloud, Google Cloud Platform (GCP).

TECHNICAL SKILLS

Languages	Java, Spring boot, Spring MVC, NestJs, NodeJs, GraphQL, Firebase, TypeScript, Angular 9, NgXs, NextJs, React, Javascript, HTML 5, CSS, SCSS
Database	NOSQL, PSQL, SQL, MongoDB
Cloud Platform	GCP, OVH
UI	Material CSS, Tailwind CSS, Bootstrap
Web Server	Web API, REST API, JSON, XML, SOAP, SWAGGER
Version Controlling	GIT, Bit bucket, GitLab
Methodologies	Agile Scrum, Waterfall, Various kind of Design patterns
IDE	JetBrains, VS Code

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Colomba-Link

Nov 2022 – Present | Full-Stack Engineer
Switzerland-based company

Colomba-Link is a technology company based in Switzerland that builds modern, cloud-based digital products. The team focuses on creating reliable platforms that handle complex data, scale well in the cloud, and support real-world business needs.

Project: Coconnect

Coconnect is an HR platform built to support individuals, businesses, and administrators through separate **B2C, B2B, and Admin** modules, covering end-to-end HR and workforce management needs.

- Developed front-end features using **React.js** and the **Siemens IX framework**, focusing on clean, consistent, and responsive user interfaces
- Built and maintained back-end services using **Java Spring Boot**
- Worked with **MongoDB** for flexible and scalable data storage
- Designed and integrated REST APIs to support multiple user roles and workflows
- Collaborated closely with product and business teams to deliver practical, real-world HR solutions

Project: Monidas

Monidas is an IoT platform that brings data from many different devices into one shared system, making it easier to monitor, manage, and use that data.

- Worked on web interfaces to view and manage device data
- Handled IoT device communication and data processing through ChirpStack (LoRaWAN)
- Helped integrate multiple device data sources into a single platform
- Supported cloud deployment and scalability improvements

Responsibilities

- Build and maintain web applications using **React.js**, **BasedIO Components**, and **Tailwind CSS**
- Develop back-end services using **BasedIO**
- Design back-end structures and database schemas
- Work closely with the team to understand business needs and turn them into technical solutions
- Take part in **sprint planning**, task estimation, and day-to-day agile work
- Write and maintain **API documentation** with **Swagger**
- Share knowledge and support team members when needed

Software Engineer

Haulmatic Technologies Dec 2019 - Oct 2022 - Full-Stack Engineering

Working on a product which consists of fleet management, transport management with end goal runs to a complex supply chain automation. This will solve practical problems of all verticals like exporters, importers, freight forwarders and customers in a supply chain.

Developing Web front-end(Angular 9 with NgXs state management, GraphQL). Covered unit tests by jasmine framework.

Developing back-end with micro service architecture(Spring boot, Node.js, Nest.js) and MongoDB.

Developing Mobile front-end(Flutter, GraphQL). Participation of pre-development process like designing, planning, task breakdown and estimation.

Contribution to deployments, Exposure on GCP and CI/CD.

3rd Line Support: Checking tickets of Production related issues/bugs and giving quick solutions either using fast tracks or assigning the

responsible team ASAP. This was done individually and as a team under a roster plan.

API Documentation using OpenAPI/Swagger

Guiding developers via KT's is one of the most prominent things I did whenever it is needed. Used Redux, Context API for web application development

Knowledge sharing and training new team members.

Responsibilities

- Analyse user requirement and map with the business model
- Sprint planing and task break down with time estimation
- Write test cases for the user requirements
- List down the tasks in the sprint through Jira and assign the members
- Take responsibility for specific area - ex -: Dynamic wizard
- Design backend architecture for change requests
- Design front-end side with state management(Angular 9 with NgXs)
- Continue retrospective meetings for the sprint to identify strengths and weakness.

Associate Software Enginner

Araaya Business Solution Dec 2017 - Dec 2019

Developed Land details apply system for Ministry of Land Development in government (Spring boot, Angular 7, MySql). Worked on some modules. Worked on a product related to EV Fast charging.

EDUCATION

BSc. in Computer Science

University of

Colombo

School of Computing

2015 - 2018

CERTIFICATIONS

Google Cloud Fundamentals:Core Infrastructure (Certificate)

Getting Started with GoogleKubernetes Engine (Certificate)

Architecting with Google Kubernetes Engine: Foundations (Certificate)

PERSONAL INFORMATION

- Name in Full : Hasiru Kavishan
- DOB : 1993/11/23
- Passport Number : N9899669
- Gender : Male
- Civil Status : Married
- Nationality : Sri Lankan
- Notice period : 1 Month
- Current Salary : 1144CHF per Month[Fixed] + 500CHF[Max OT]
